

RECYCLABILITY FACT SHEET

Recycling

Our PVC is fully recyclable and can be “up-cycled” into new products at end-of-life, meaning that PVC waste out of short term applications (life expectancy a few weeks or months) can be recycled in products with a life expectancy of 30 to 100 years or more.

Source: VinylPlus

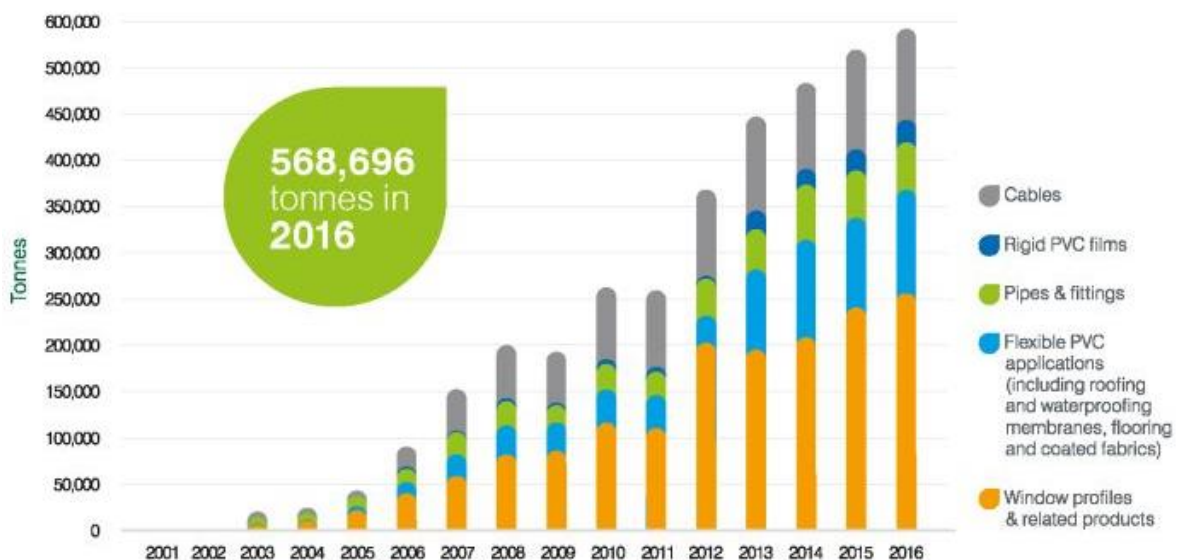

On average about 15% of our foil is recycled material. In total about 75% of the waste material is recycled internally and the other 25% is recycled externally.

Draka Polymer Films supports and funds VinylPlus, which is an important initiative driven by the whole value chain of PVC in Europe.

VinylPlus is the renewed ten-year Voluntary Commitment of the European PVC industry. The programme establishes a long-term framework for the sustainable development of the industry by tackling a number of critical challenges, in the EU-28, Norway and Switzerland.

PVC RECYCLED WITHIN THE VINYL 2010 AND VINYLPLUS FRAMEWORKS
